## NEUROBIOCHEMISTRY: SELECTED TOPICS

Springer. Paperback. Condition: New. 228 pages. Dimensions: 9.6in. x 6.7in. x 0.5in. The field of the neurosciences is one of the most rapidly growing in present biological research. Its molecular aspects are dealt with by the discipline of neurobiochemistry. As the theme of the Mosbacher Colloquium, we chose this term rather than the term neurochemistry, in order to stress the dynamic biochemical aspects of present molecular neurobiology and to avoid the flavor of being purely descriptive and static, which is frequently associated with the term neurochemistry. This appears the more warranted, since the natural products and analytical chemistry phase of discovering the basic chemical components of the nervous system has passed its culmination. The period of assessment has laid the foundation for studying the dynamic interplay of the various chemical components in the actual biological operation of nervous tissue. Thus, neurobiochemistry is that part of the neurosciences which is dominated by the ways of thinking and the methodology of biochemistry. For this Colloquium only topics were selected that deal with the biochemistry of neurons. Thus, we excluded from the agenda other neural cells such as glial cells (astrocytes, ependymal cells, oligodendrocytes), meningeal cells, and capillary endothelial cells. This restriction was applied for two reasons: (1) The time available for the meeting did not allow an extensive display of the whole spectrum of neurobiochemical research. (2) The biochemistry of neurons is far more advanced than that of any other cell type of the nervous system. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
